Shelf Life

Project Milestone 5 - Features testing

Features User Acceptance Tests:

Order Forms:

1. User is directed to order forms page where inventory is displayed
2. User enters his ID, The Ingredient ID, and the quantity of the ingredient he wants to order
3. Redirects you to the Inventory page where the ingredients amount in stock will be updated

Create Account:

1. Goto Create account page
2. Enter invalid user information (text in phone number box, etc.) to make sure it doesn't accept it so our database won't have any unimportant data
3. Enter valid user info and submit
4. Check database to see that the information was added
5. Login using the login function and make sure everything is working

Sales:

1. First we will confirm that our software meets the user's requirements and modify/resolve any discrepancies.
2. Enter dummy orders into the database
3. Select the monthly in the dropdown, click submit, and compare the sales to the dummy orders recently made.
4. Repeat step 3 for the daily and yearly
